EDUCATION

Manipal Institute of Technology (MIT) <i>Bachelor of Technology in Data Science; CGPA: 7.88</i> – Relevant Coursework: Machine Learning, Deep Learning, Data Structures & Algorithms, Operating Systems, DBMS, Computer Networks, Software Engineering, Compiler Design, OOP	Manipal, India 2023 – 2027 (Expected)
Sri Sri Ravishankar Vidya Mandir School <i>Class XII; Percentage: 86.6</i>	Surat, India 2023
Sri Sri Ravishankar Vidya Mandir School <i>Class X; Percentage: 88.8</i>	Surat, India 2021

EXPERIENCE

Data Analytics Intern <i>Avaada Electro</i> – Analyzed 50k+ MES production records using Excel to identify trends, bottlenecks, and rejection patterns. – Standardized line-wise rejection reporting by consolidating 5 disparate formats into a single KPI-driven framework. – Designed and deployed 7 Power BI dashboards tracking production volume, rejection rates, and loss metrics. – Enabled mobile-accessible dashboards for plant managers, reducing manual reporting effort by 40% . – Improved data-driven decision turnaround time by 30% through automated reporting workflows.	Dec 2025 – Jan 2026
---	---------------------

PROJECTS

Language Translation & Summarization Model Python, TensorFlow, Keras – Built a transformer-based NLP model supporting multilingual translation across 5+ languages . – Trained on 100k+ sentence pairs , achieving high semantic accuracy and fluency in generated outputs. – Reduced inference latency by 20% via optimized tokenization and batch processing. – Enabled automated summarization pipelines capable of processing 1,000+ documents per execution.	
E-Commerce Database System MySQL, Flask API, Python, HTML, CSS – Designed a normalized relational database with 10+ entity tables for users, products, orders, inventory, and payments. – Implemented 20+ complex SQL queries for analytics, inventory monitoring, and user behavior tracking. – Automated cart and order lifecycle management using triggers and stored procedures, reducing manual operations by 30% . – Built RESTful APIs with Flask to handle transactional workflows and CRUD operations efficiently.	

SKILLS SUMMARY

Languages: C, C++, Java, Python, SQL
Tools & Platforms: Git, Jupyter Notebook, Power BI, Tableau, TensorFlow, Keras, OpenCV, WordPress
Web Development: HTML, CSS, JavaScript, Bootstrap, Next.js, Django

ACHIEVEMENTS & CERTIFICATIONS

Microsoft Data Visualization Specialization – Microsoft (Jan 2026) – Completed 5-course specialization covering Power BI, DAX, data modeling, and analytical storytelling. – Converted complex, real-world datasets into 10+ decision-ready visual reports that enabled faster insight discovery and trend analysis. – Applied advanced DAX measures for KPI tracking, time intelligence, and performance analysis. – Credential Link
Generative AI with Large Language Models – AWS (Oct 2025) – Gained hands-on experience with LLMs , transformers, and prompt engineering techniques. – Built prototype applications leveraging LLMs for summarization, content generation, and task automation. – Understood deployment considerations including inference optimization, latency, and cost trade-offs. – Credential Link

POSITIONS OF RESPONSIBILITY

Public Relations & Outreach Head <i>The Data Alchemists</i> – Leading branding, outreach, and sponsorship initiatives for 200+ members technical club. – Managing digital campaigns, collaborations, and external communications. – Driving community engagement and increasing the club's visibility across campus.	Aug 2025 – Present
